

Garbage, Garbage Everywhere!

1. What is the weight of the garbage your class made today?
2. Imagine that there is another class that makes as much garbage as your class does. If you add the weights of the garbage created by the two classes, how much garbage would you have?

_____ (weight of garbage from your class)

+ _____ (weight of garbage from the other class)

3. Imagine that your school makes 129 lbs. of garbage every day. Next, imagine that your entire class was sick yesterday. There was no garbage made by your class. How much garbage did the school make? (Hint: Subtract the weight of the garbage your class made in one day from the weight of the garbage the entire school makes in one day.)

BONUS QUESTION—This one is tough!

4. How much garbage will your class make in one week (five school days)? (Hint: start by writing the amount that is made each day, then add the days together.)

Monday _____

Tuesday _____

Wednesday _____

Thursday _____

Friday _____
